

Senior Cat Care SOP

Senior cats are classified as 7 years old or older.

Senior cats are to be watched for health and wellness more closely than young adult cats or kittens in the cat program.

Senior cats are to be weighed once weekly, and their weight is to be recorded. These weights are to be entered into ShelterLuv.

Symptoms such as significant or rapid weight loss, anorexia, vomiting, diarrhea, lack of/inappropriate urination, are to be reported to the clinic and management as soon as possible.
